

Quick Release Hub question

Posted by Manuel_M - 20 Feb 2013 20:37

Hey guys,

The quick release hub I'd like to get only comes in a 3/4" weld on adapter. My question is can this be welded to the 5/8" steering shaft of the porsche or do I have to get a different hub? Thanks.

Anything can be welded together, getting it true will be the tough part!

Yep, the only way I ever did this was to machine the hub on a lathe so it was an interference fit over the steering shaft. I would then freeze it and press it onto the shaft. Last step was to TIG weld it. This is one item you dont want to screw up!

That's a good point, to be on the safe side I should just get a 5/8 hub and it should be easy to keep true.
