Hi Members,
I'm brand new to road racing (number of years of asphalt roundy-round racing though). I want to run in the Chumpcar series next year and I'm seriously considering the 944 platform.
Endurance is a big deal (up to 24hr races) What is the best way to prep the 2.5L for this type racing? ie. baffle in oil pan? what can be done within reason and rules to make it bullet proof?
What other challenges with the chassi should I look at? ie. aluminum vs steel control arms? (visa versa) I've seen some chatter about these but dont have the experience to know the issue
ANY words of wisdom would be greatly appreciated I have just started reading the discussions and tech articles on this forum too. Great source of info.
I live in Tampa, FL.
Thanks in advance
tim

Depending on how far you go into the motor, using an '83 cross drilled crank, or cross drilling a later crank can be helpful. In any case put new rod bearings in, and check that the clearances meet spec

crank can be helpful. In any case put new rod bearings in, and check that the clearances meet spec. Steve's got the rest pegged above. Good luck!

So 83 Crankshafts have the cross drill mod already done?
