

AC hose removal

Posted by dustinh - 01 Jul 2013 07:21

Hey all,

I pulled all the ac / heater stuff from under my dash this weekend. That left 2 ac hoses coming into the cabin. I haven't pulled the ac from the car yet, but it looks like removing those metal lines is going to be difficult/impossible with the engine in the car. Is it fine just to leave them in there? Wasn't sure if I could cut them or if I should just leave them for now. Thoughts?

Thanks,

Dustin

As long as the system is discharged then take a sawsall to them or whatever works to remove them.

It is going to be very hard to remove the lines with the engine on the vehicle. I would leave the lines there and will remove it when you've the engine removed. They don't weight all that much.
