PUT LOCKTIGHT ON YOUR ROTOR SCREW Posted by SvoChuck - 17 Jul 2008 10:35

•

Well the fourth time this year we had a car drop out due to the set screw coming loose on the rotor. I recomend making sure you locktight that little @\$%^& screw in place. Dirks got a black flag so I could have earned a big lead in the points but now it's still up for grabs in the rm region!
