Harness advise Posted by Gary_44 - 21 Jul 2008 13:35
What type of 5pt harness works for the 944, I don't mean which brand but what length, bolt mount or rollcage mount?
thanks.
I duplicated on the NASA forum, so no need to answer both.

Do I read that right? An SFI 16.1 can be used with any head restraint, SFI 16.5 I'm limited to only HANS?
Yep,
16.1 is the standard 3" belt. 16.5" are " Hans specific" and have 2" wide section where the ride over the HANS. Those belts are only allowed if a HANS is used. The 3" can be used with either HANS or not. I use 3" belt. I also got ones with FIA approval. The reason is that SFI belts are good for only 2 years before the " expire". If they are also FIA rated then you get to used them for 5 years. Most belts are good for 5-10 years if you treat them right so gettings with an FIA tag gets you alot more useful life from them. I spent \$300 on a set of Schroth FIA belts a few years ago. Expensive belts, but very very nice. When these expire at the end of next year I will probably get another set of these belts.
