

Original Gauge Cluster

Posted by Manuel_M - 19 Jan 2016 10:23

Hey Guys,

I am currently rewiring my car and need some assistance. I have an 86 and have removed the relay panel/all original wiring. Overall its pretty much finished other than I am not sure how to power/ground the original gauge cluster (I have a few aux gauges also).

I have traced out all the signal wires from the senders back to the instrument panel; however, can not figure out how to power and ground the panel and/or individual gauges. Any assistance would be appreciated!

All wires from i19 were power, all from h32 were ground.
